18 Month Well Child

Name: _____ Date: _____

Weight: _____ lbs _____ oz Length: _____ in Head Circumference: _____ cm

Age: _____ Next Scheduled Appointment: _____

General Nutrition:

- Milk consumption should be 16-24 oz. daily of whole milk including dairy products such as cheese and yogurt.
- No bottles or pacifier should be used at this point.
- Establish meal times and limit snacking.
- Offer a variety of food from meats, grains, beans, fruits, and vegetables.

Sleep:

- Your toddler should sleep 11 to 13 hours per day which is likely to include one afternoon nap.
- Promote self-soothing behavior in bedtime routine.
- Lower crib mattress for safety until your child is ready for transition to a toddler bed.

Development:

Gross Motor: Walks well and can skip, jump and run. May climb on age appropriate equipment and can walk up and down stairs with assistance for balance.

Fine Motor: Hand eye coordination improves. Can help with dressing by pulling on clothes and learning to fasten clothing with help.

Speech and Language: Vocabulary will continue to grow to approximately 50 words. Can point to named objects and may enjoy making animal sounds.

Social: More aware of himself or herself as individual. Likes to play with toys but doesn't want to share. Maybe apt to tantrums but can easily be redirected.

Discipline:

Your child will continue to test limits so it is important to be persistent in your established limits. Look for positive behaviors to praise and promote desired behaviors.

Immunizations:

- HIB- Haemophilus influenza type B

Lab tests:

- None unless warranted by exam.

Fever:

- A fever is considered a rectal temperature greater than 100.5° F.
- Take your baby's temperature under the arm. If elevated do a rectal temperature for confirmation.
- To take a rectal temperature;

- Put a small amount of Vaseline™ on the end of the thermometer.
- Lay your baby on his stomach, with one hand on his bottom and your arm resting lightly on his back to keep him from rolling. Holding the thermometer in the other hand, gently insert the bulb (the silver part) into your child's rectum. You only need to insert it far enough to cover the bulb.
- After it stops, remove the thermometer and read the temperature.
- Make sure you clean the thermometer well after each use.
- If your baby has an elevated temperature first try to undress your baby leaving only the diaper and recheck in ten minutes. If remains elevated you need to give us a call for additional guidance.

Call the office if your baby:

- Has a rectal temperature over 102.0° F especially without any explanation or associated cold symptoms
- Coughing frequently
- Vomiting persistently or excessively
- Falls, hits his/her head and passes out, vomits or behaves unusually
- Refusing to eat
- Does not look well or is unusually sleepy or inconsolable
- If you have any questions

Important Phone Numbers:
